

MT112

The MT112 Door Strike Release has been specifically designed for high security applications on hinged doors where superior strength is required such as prisons and institutional complexes.

The unique design is suitable where multiple throw lock bolts are incorporated on the door or where large heavy doors need to be controlled by remote operation.

The MT112 device provides a dual completely independent locking system, along with dual integrated monitoring of strike functions for maximum security applications. It can be incorporated into any access control system and/or interfaced into other fire and security systems for total building management.

Extremely high holding force
In excess of 2 Tonnes

Dual monitoring
Independant strike jaws and lock bolt position

All locking components
Case hardened and moly coated

Anti-tamper monitoring

High tensile frame and locking components

Corrosion and tropical environment treated

Remotely or locally controlled

Safety to security personnel
Doors throw ajar indicating door is unlocked.
